

Cross Platform Mobile Developer

Overview

Be part of a team dedicated to Regenerative Agriculture across the globe, in order to regenerate grazing land and topsoil, increase biodiversity, increase resilience to drought, and increase the vitality of grazing both in Australia and right around the world.

We provide decision support tools for planned-grazing, and holistic farm management. Be part of a growing revolution that can help change the face of agriculture as we know it.

This is a full-time permanent role, in a growing company, backed by strong domain expertise, with a team structure designed for growth and learning.

We use some of the latest frameworks and processes, in an interesting domain that includes complex data management and analytics.

Our platform delivers both iOS and Android apps, maintaining data with a cloud-based environment, also managing offline data storage and synchronisation.

About you

- Do you crave autonomy and decision making?
- Do you thrive under fast and frequent deliveries?
- Do you want to automate all the things and deploy with zero downtime?
- Do you care about fixing each problem once and for all?
- Do you have a passion about coding, obsess about code quality and automation, and always put customer first?

These are the qualities that we value, and Maia Technology is striving hard towards them. To survive in the age of the customer, we realise we can't be just a good software company; we need to be a great software company.

To make it real, we need people like you.

We're looking for a self-motivated **Cross platform Mobile developer** who has a strong technology foundation and can identify and solve difficult open-ended problems and cope with a complex and versatile environment, to join our team on a permanent basis. If you're the kind of engineer who not only embraces change, but relishes the opportunity to drive it, you may be the person we need.

Experience and Qualifications:

Minimum of 3 years in native mobile (iOS/Android) and/or cross mobile platform development. A bachelor degree in Information Technology or equivalent is preferred.

Essential Skills

- Developed commercial products with iOS, and/or Android, with a minimum of 3 years experience.
- Being able to understand and adapt to new coding frameworks/languages.
- Experience with BDD and TDD, preferably in a mobile framework environment.
- Worked with RESTful APIs.
- Experience working with Reactive Programming.
- Strong understanding of different design patterns, and reasons for using or not using them.
- A familiarity of platform differences between iOS and Android, such as the use of widgets, gesture behaviours, libraries, etc.
- Comfortable with using command line in a Unix or equivalent environment.

Desirable Skills

- Commercial experience working with cross mobile technology such as NativeScript, React Native or Flutter. Or an interest in working with such technology.
- Experience integrating with map libraries, offline storage, and push notification services.
- Experience with CI/CD processes.
- Experience using frontend technologies such as Angular, ReactJs, and/or Vue.

Must be across modern Agile and Scrum methodologies, and team self-organisation.
Excellent communication skills, with the ability to understand business problems
Essential to have previously delivered mobile products.
